

## ABSTRACT OF THE DISCLOSURE

An apparatus and method provides information associated with a location of a target user in a location service arrangement including a plurality of location service entities. The method includes the steps of sending a request for information associated with a location of a target user from a first location service entity to a second location service entity. The method includes the step of informing the second location service entity of a role performed by the second location service entity when processing the request. The method also includes the step of processing the request at the second location service entity.
